

Parent Information About Behavior Management Techniques for Child Dental Patients

We do our best to give your child the best quality dental care in a safe and caring environment.

Every effort will be made to work with your child to gain cooperation through understanding, gentle guidance, humor, and charm. When these fail, there are other management techniques that can be used to eliminate or minimize disruptive behavior. Dr. David and our team have received training in the following techniques accepted by the American Academy of Pediatric Dentistry:

- **Tell-Show-Do:** the dentist or staff member explains to the child what is to be done, shows an example on a tooth model or on the child's finger, then the procedure is done on the child's tooth.
- **Positive Reinforcement:** rewards the child who displays cooperative behavior with compliments, praise, a pat on the shoulder, or a small prize.
- **Voice Control:** the attention of a disruptive child is redirected by a change in the tone and volume of the dentist's voice in order to reestablish communication.
- **Mouth Props:** a padded device is placed in the mouth to prevent closure of the child's teeth on the dentist's fingers or dental equipment.
- **Hand and/or head holding by dentist or assistant:** an adult keeps the child's body still so the child cannot grab the dentist's hand or sharp dental tools.
- **Nitrous Oxide:** medication breathed through a colored/flavored nose mask to relax a nervous child. The child remains awake but is relaxed and calm. Nitrous oxide is also known as *laughing gas*. Children with sensitive stomachs may become nauseated when breathing nitrous oxide.
- **Protective Stabilization Wrap:** a body wrap made of fabric mesh and Velcro that is placed around the child to limit movement that may cause self-injury. Usually reserved for emergencies, individuals with certain special health care needs, and sedations - it is NEVER used without the prior consent of the parent or legal guardian.

If your child requires additional time, personnel, or advanced behavior management techniques to safely deliver care, a separate Behavior Management fee may be assessed at the discretion of the doctor.

The above behavior management techniques have been explained to me and I have had a chance to ask questions. I understand the what, when, how, and why of their use, and the risks/benefits/available alternatives.
